Composite decking vs wood: the benefits of composite decking

If you're looking to install a new outdoor deck at home, or even refresh what you already have, you may want to consider installing our PLYDECK composite decking boards instead of timber boards.

Check out some of the benefits of choosing composite boards.

Environmentally friendly

Our PLYDECK composite decking boards are made from a combination of over 90 percent reclaimed timber, bamboo and recycled plastic. However, they've been carefully engineered and designed to look and feel like natural timber.

Designed especially for our weather conditions

Wherever you live around Trinidad or Tobago, or even anywhere else in the Caribbean, composite decking boards are suited to all types of weather conditions. Our PLYDECK composite decking is naturally resistant to termites, rot, decay, mildew and mould. It is also ideal for laying around chlorine pools or in coastal areas near salt water.

This gives composite decking a great advantage over wood!

Another great benefit of composite decking boards is that they do not cup, warp or splinter.

Making this material the BEST CHOICE for families with small children.

Composite deck boards are also U.V. stable, which means that their colour won't fade over time like normal timber.

Easy installation

Composite boards are installed and sanded in the same way as timber boards. However, they are often denser than wood, so when cutting, you may need a new, sharp, blade.

One thing to note is that composite boards can slightly expand in high heat. Then when the boards cool down they will shrink back to size. So, depending on when you measure up and install your composite boards, you'll need to consider the gaps that you leave.

Low maintenance deck care

The best thing about composite decking boards is that they don't need any painting, sealing, staining, oiling or varnishing. The time saved in labour over the lifetime of the boards can be huge compared to wood.

To clean the boards, you'll just need a bucket of warm soapy water and a high-pressured hose. To remove a more permanent stain, use a brush with stiff bristles and soapy water.
